

Please amend the Abstract of the Disclosure as follows:

The present invention provides a charging interface. The interface includes a first contact interface system for receiving a male connector. The first interface contact interface system includes a housing with a front surface, where the front surface includes an aperture leading to a well within the housing. A first positive contact is disposed within the well and a first negative contact is disposed within the well. The interface also includes a second contact interface system comprising conductive contacts disposed on the front surface outside the aperture. The conductive contacts comprise a second positive contact and a second negative contact.

In the Claims:

Please amend claims 1, 5, 8, and 10 as follows:

1. (Amended) An interface for use with a portable rechargeable device comprising:
a first contact interface system for receiving a male connector, the first contact interface system comprising a housing with a front surface, wherein the front surface includes an aperture leading to a well within the housing, and wherein a first positive contact is disposed within the well and a first negative contact is disposed within the well; and
a second contact interface system comprising conductive contacts disposed on the front surface outside the aperture, wherein the conductive contacts comprise a second positive contact and a second negative contact, wherein the aperture receives a charging member to detent the second positive contact and the second negative contact with corresponding contacts on a charger.

5. (Amended) The interface of claim 4, wherein the aperture includes a semi-spherical surface that the member from the charger mates with to align and detent the conductive contacts on the portable device with the corresponding contacts on the charger.
8. (Amended) The interface of claim 1, wherein the first contact interface system and the second contact interface system are electrically coupled to terminals of a rechargeable battery at a headset and transfer charging power to the rechargeable battery, allowing either the first charging interface system or the second charging interface system to be used to transfer charging current.
10. (Amended) The interface of claim 1, further comprising a mounting means for mounting the contact device on a headset.

Please cancel claims 2 and 12-17.

Please add claims 18-21 as follows:

18. (New) A charging interface for use with a headset comprising:
a housing with a front surface, wherein the front surface includes a single aperture leading to a well within the housing, and wherein the single aperture provides access to a first charging interface disposed within the well; and
a second charging interface comprising conductive contacts disposed on the front surface outside the aperture, wherein the single aperture may receive a member to align and detent the conductive contacts with corresponding contacts on the charger.
19. (New) The charging interface of claim 18, wherein the single aperture includes a semi-spherical surface that the member mates with to align and detent the conductive contacts with corresponding contacts on the charger.
